CYFOR

eDISCOVERY | DIGITAL FORENSICS | CYBER SECURITY

Protecting businesses and
responding to cyber attacks
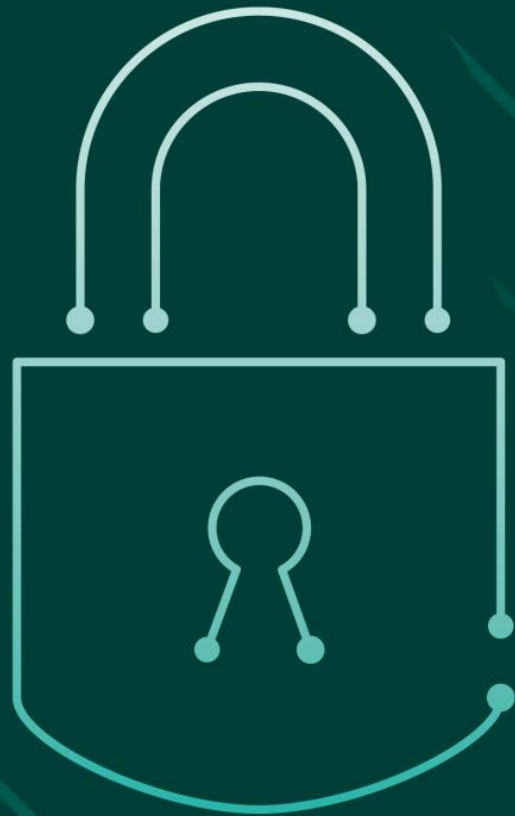

Cyber Security

Since our inception in 2002, cyber security has been at the core of our service offering and we acknowledge the complexities of protecting an organisation's electronic data. Our team of expert consultants are specialists in a range of counter cyber-attack techniques and possess industry leading expertise in digital forensics.

Business Risk

Organisations are aware of cyber security and the requirement to safeguard themselves, due to multiple high-profile attacks covered by the media. But how many know where to start in actively taking the necessary precautions to protect themselves?

Understanding the tangible risks involved from a business perspective and positioning cyber security at the top of the business agenda is the next logical step forward. Senior management understand the need to safeguard their company's digital assets and that cybercrime is a risk management issue that requires complete overview.

They are responsible for the future of their organisation, with shareholders expecting that suitable investment has been implemented to mitigate risk in multiple forms.

Failure to secure your organisation will result in;

- Financial loss
- Reputational damage
- Data theft
- Regulatory investigations
- GDPR fines

Our Expertise

We have a team of experienced cyber security professionals on hand to protect and secure your business. Starting with cyber security audits to fully assess your business, through to extensive penetration testing, our team can assist with all aspects of security. We support an organisation's cyber security posture by identifying risks and establishing protocols to improve practices, while raising awareness of evolving cyber threats. No matter the size, location or present cyber security resilience of your business, you can be assured that CYFOR are the experts to safeguard your digital assets.

Cyber Security Audit

Our Cyber Security Audit is a comprehensive analysis of your business's IT infrastructure, exposing weaknesses and high risk practices. Our specialists are experienced in conducting these extensive security audits across a broad range of industries. They can advise on the best course of action to vastly improve your cyber resilience, securing your data and protecting your business.

Penetration Testing

Ensuring that your IT systems are able to sustain a cyber-attack is a crucial step in preparing for the inevitable real event. Penetration testing is an ethical hacking process designed to expose any weaknesses in your organisation's network, allowing you to apply re-mediation measures. Our comprehensive reporting will provide you with the necessary guidance to protect your company assets.

Vulnerability Assessment

Vulnerability Assessments assist in preventing network attacks by identifying the vulnerabilities and configuration issues that hackers use to penetrate your network. Our advanced scanning software detects live risks to a company's infrastructure by identifying new vulnerabilities and preventing unauthorised access. This is tested against the world's largest integrated public database of exploits.

Cyber Incident Response

If your organisation suffers a cyber-attack, it is critical that rapid remediation techniques and forensically sound methodology are used to investigate the cause of the breach, avoiding critical damage. Our experienced Cyber Incident Response team is available 24 hours a day to respond to incidents, with the aim of neutralising threats and quickly getting you back to operational effectiveness.

Secure Infrastructure

The importance of security in both our corporate practices and in the work undertaken for clients is something we view with great importance. Independently inspected and verified by the Metropolitan Police, our secure infrastructure is ISO 27001 accredited, providing the highest level of security and industry recognised standards.

Cyber Essentials Plus

CYBER ESSENTIALS PLUS

CYFOR is Cyber Essentials Plus accredited. A scheme developed by the Government and cyber security industry to provide a clear statement of the controls all organisations should implement to mitigate the risk from internet based threats. This framework offers a mechanism for organisations to demonstrate to stakeholders that they have taken essential cyber security precautions.

CYFOR are a qualified Certification Body for Cyber Essentials and can certify your business in an efficient and cost-effective manner. We provide technical expertise, consultancy and support to help your business achieve Cyber Essentials certification.
