Digital Forensics

- Computer Forensics
- Mobile Phone Forensics
- Audio Visual Forensics
- Cell Site Analysis

Digital Forensics has been at the core of CYFOR's service offering since inception in 2002. With a comprehensive range of forensic services and a proven capability, we are instructed on a vast range of legally aided, corporate and private cases. We have the expertise to recover, analyse and present digital evidence from multiple forms of digital media held within the UK and internationally.

About us

Recognised as industry experts, we have the expertise to recover, analyse and present digital evidence from multiple forms of digital media held within the UK and internationally. With over 15 years of expertise, we have experience working for both the defence and prosecution. This allows a perspective into the challenges and goals faced by each party, and subsequently how to achieve the expectations of our clients.

CYFOR are instructed on a vast range of digital forensic investigations, covering a full spectrum of criminal matters. This experience has seen us complete numerous high-profile cases, many of which have been featured by the national and international media;

- Fraud
- Assault
- Firearms
- Terrorism
- Murder
- Indecent imagery
- Drugs
- Burglary

Our team of specialist criminal case managers are acutely aware of the sensitivity and time critical nature of instructions. That is why we operate a 24-hour turnaround on quotations, while informing clients of developments at each stage of the case.

Our Experts

CYFOR's highly qualified digital forensic specialists are recognised as some of the industry's leading specialists. Comprised of ex-military and ex-police professionals, their combined expertise becomes even more powerful for the most complex of cases, while going above and beyond to exceed client expectations.

They utilise the latest technology and digital forensic techniques to discover all potential evidence within a wide range of investigations. All investigators are Expert Witness trained and strictly adhere to the ACPO Guidelines and thorough forensic protocols. This ensures comprehensive reporting, often concluding with expert evidence presented in court.

Incident Response

CYFOR have a fully security cleared Incident Response Team, who are on standby 24 hours a day. They are experienced in responding to search and seize orders, last-minute instructions and data recovery. Operating internationally, they provide a fast and effective response to ensure preservation of evidence, which is critical to the success of any investigation where digital evidence is scrutinised.

Forensic Data Collection

Operating globally, our digital forensic investigators are experts in complex data recovery, across the full spectrum of digital devices, under time restrictive deadlines. We understand the critical nature of imaging computers, phones and other digital devices using forensically sound methodology. This is vital if the integrity of any subsequent investigation is to be maintained.

Secure Infrastructure

The importance of security in both our corporate practices and in the work undertaken for clients is something we view with great importance. That's why our secure infrastructure and evidence storage facility is ISO 27001 accredited and has been independently inspected and verified by The Metropolitan Police. We also have at our disposal security cleared in-house couriers, to securely collect evidence across the country.

Cell Site Analysis

Cell Site Analysis is a means of establishing the geographical location of a mobile phone at a specific time and place. This is obtained by analysing call data records (CDRs), including SMS messages and data usage. Our cell site consultants are some of the industries' leading professionals, who have provided expert witness testimonies and invaluable admissible evidence in court.

- Digital Media Investigations
- Forensic Readiness Planning
- Onsite Investigations

Digital Forensics Training & Seminars

CYFOR offer bespoke training seminars that give you and your colleagues a detailed insight into digital forensics. Our seminars break down the different forensics specialisms and demonstrate how they can be instrumental to your criminal cases.

These educational sessions typically last an hour and are arranged entirely at your convenience. They can be held at your premises, perhaps as part of your monthly meeting or as a breakfast/lunch briefing.

Seminar Topics

Our specialists are on hand to discuss the various digital forensics disciplines that we provide and how they can be applied to your existing and future cases. Past topics, which can be tailored at your request, have included;

- The importance of forensic methods for data preservation.
- What is cell site analysis and what evidence can it provide?
- Computer and mobile phone forensics – what data can be recovered?
