- Electronic Disclosure
- Fixed Price Quotations
- EDQ Consultancy
- Forensic Data Collection
- Early Case Assessment
- Predictive Coding
- Onsite Processing
- Bespoke Training

Operating globally since 2002, CYFOR is a leading eDiscovery, Digital Forensics and Cyber Security provider. Our ability to combine specialist digital forensic techniques with end-to-end eDiscovery workflows gives us a leading edge. Incorporating all phases of the Electronic Discovery Reference Model (EDRM), we have a proven capability from forensic extraction through to production.

Our Expertise

CYFOR supports law firms, corporate clients, regulatory bodies and government agencies involved in litigation, dispute resolution and regulatory investigations. We are instructed by clients from a range of industries and offer a bespoke solution on highly contentious, multi-lingual and multi-jurisdictional matters, with time critical deadlines.

This breadth of experience, combined with a highly secure infrastructure, enables us to operate at the highest level on a vast range of investigations.

Fixed Quoting Structure

With over a decade of experience in handling electronically stored information, we offer fixed price quotations, providing a highly focused and transparent pricing methodology. This gives full visibility of costs at the start of any project, ensuring that budgets are accurately controlled and maintained.

This also enables the electronic disclosure process to be applied to smaller cases on an investigatory basis. Our client focused, consultative approach has enabled us to deliver exceptional and cost-effective results, time and time again.

Forensic Data Collection

Our digital forensic investigators are experts in complex global data extractions, across a full range of digital devices, under time restrictive deadlines. We understand the critical nature of imaging digital devices, especially in cases where investigations or electronic disclosure may be required.

Using forensically sound methodology to preserve metadata is vital if the integrity of a subsequent investigation is to be maintained. From extraction through to presentation in court, CYFOR maintains secure evidence continuity, throughout the entire life-cycle of your data.

Data Processing | nuix

Partnering with best-of-breed technology providers, including Nuix, we have the advanced tools to process the most complex of data sets. Processing is fully supported by experienced and technology certified eDiscovery project managers, who provide consultancy from either our secure headquarters, or onsite, at client premises.

The power of Nuix enables us to rapidly and accurately search, process and manage vast quantities of data. From collection through to production, Nuix is the go-to platform for extensive data management and international remote downloads.

Online Document Review

We heavily invest in advanced end-to-end technology solutions to service every stage of the eDiscovery life-cycle and these can be scaled to meet clients' specific requirements. These customisable platforms effectively manage vast amounts of data, enabling case teams to create basic workflows from small, simple reviews to the most complex of projects.

From legal hold through to production, including Early Case Assessment (ECA), we have the tools and advanced analytics to tackle an investigation and a full range of review challenges.

Secure Data Hosting & Infrastructure

We protect and host our clients' data within our own secure data hosting environment, which operates on an independent server. This high-performance infrastructure is ISO 27001 certified and has been independently inspected by The Metropolitan Police.

Combined with industry leading technology, this provides clients with a scalable solution and a single point of accountability to ensure all eDiscovery requirements are met.

- Online Document Review
- Secure Data Hosting & Back Up
- Managed Document Review
- Print, Export & Production

eDiscovery Specialists

Our eDiscovery specialists are Relativity certified and have the technical knowledge, consultancy skills and experience to operate as a natural extension to your team.

They have provided expert witness testimonies on multiple high-profile matters and have demonstrated the integrity of Relativity document review within the High Court. This also includes proficiency in applying expert consultancy to scrutinise the integrity of opposing parties' eDiscovery workflows.

Training & Seminars

CYFOR offer bespoke eDiscovery training and educational seminars, tailored to your firm's specific requirements. Our specialists break down the component elements of the complete eDiscovery life-cycle, demonstrating how each stage can be instrumental to your case.

These educational sessions typically last an hour and are arranged entirely at your convenience, providing a detailed insight into electronic discovery and keeping your firm ahead of the curve.

Online Review Platform Demonstrations

As eDiscovery specialists, we have at our disposal the industry leading Relativity online review platform. Regardless of the complexity, size or needs of your matter, Relativity brings everything together in one platform to help simplify and accelerate how you conduct electronic disclosure and investigations.

Core Features

- Predictive Coding
- Analytics and Assisted Review
- Email Threading
- Data Visualisations and Dashboards

To illustrate Relativity's full potential within an eDiscovery environment, we offer complimentary demonstrations, arranged at your convenience. These are hosted by one of our senior eDiscovery specialists, via secure HD web conferencing, and cover the core advanced features of the platform, including predictive coding, visual analytics and email threading.
