eDiscovery

Leading eDiscovery specialists
providing comprehensive solutions to
support litigation, dispute resolution
and investigative matters.

About us

Operating globally, CYFOR is a leading eDiscovery, Digital Forensics and Cyber Security provider. These specialisms extensively cover commercial, criminal and corporate investigations, as well as litigation and dispute resolution matters.

Our ability to combine specialist digital forensic techniques, with eDiscovery workflows and advanced data analytics, provides a leading edge, with a proven capability from extraction through to production.

Individually, our expert analysts are recognised as some of the leading specialists in the industry. As a team, their combined expertise becomes even more powerful for the most complex of cases.

We are instructed by clients from a full spectrum of industries and offer a bespoke solution on highly contentious, multi-lingual and multi-jurisdictional matters with time critical deadlines. This breadth of experience, combined with a highly secure infrastructure, enables us to operate at the highest level on a vast range of investigations.

Combining Dynamic eDiscovery Solutions With Digital Forensics Expertise

Specialists

CYFOR's Digital Forensics and eDiscovery personnel are recognised as some of the industry's leading specialists. Their experience spans small bespoke matters, through to large, highly complex and multi-jurisdictional investigations and disclosure projects.

Our eDiscovery team are all Relativity Certified Administrators and are experts in Relativity Analytics & Technology Assisted Review. This enables them to handle the most complex cases, while going above and beyond to exceed client expectations.

Fixed Quoting Structure

Producing information for review and analysis in response to disclosure requirements can be time consuming and expensive. With over a decade of experience in eDiscovery we know it's essential to have a handle on costs. That is why we provide transparent, concise and easy to digest fixed price quotations. This not only helps your clients predict costs but also enables the eDiscovery process to be applied to smaller cases on an investigatory basis.

Complimentary Consultations

We understand the multiple challenges that are faced within eDiscovery, including transparent upfront costs. That is why we offer no obligation, complimentary consultations from our industry experts. We also endeavour to provide a realistic and competitive cost estimate on the day an enquiry is made.

Forensic Data Collection

Capturing digital evidence using forensically sound methodology is vital if the integrity of any subsequent investigation or disclosure is to be maintained.

Our digital forensic specialists operate globally, often travelling at short notice to ensure that a complete set of onsite data is recovered. We also have the ability to remote access and download data from computers using bespoke, secure software.

Infrastructure

The importance of security in both our corporate practices and in the work undertaken for clients, is something we view as hugely important. That's why our secure infrastructure is ISO 27001 accredited and independently inspected by The Metropolitan Police. This allows for the scalability of our eDiscovery service within complex investigations, providing you with the tools and managed services to ensure your requirements are met.

Secure Data Hosting

We protect our client's data by hosting in our own secure data farm situated within our head office. CYFOR data security is powered by an intelligent security model using high-performance infrastructure allowing 24/7 access, which is maintained by a handful of NPPV security cleared senior employees.

Technology

Online document review platforms are powerful and indispensable tools in the eDiscovery process. CYFOR has strong partnerships and full certification with 'best of breed' eDiscovery software vendors, enabling us to provide a full suite of services for the disclosure of electronically stored information (ESI). This full spectrum of review platforms allows for vast amounts of data to be processed and disseminated in the most complex of investigations, while drastically reducing time and costs.

Relativity®

Relativity is an advanced online review platform, incorporating email threading, predictive coding and advanced search analytics technology. These core features vastly improve review speed and allow data to be filtered and visualised.

As an eDiscovery solution, Nuix's exceptional processing power enables CYFOR to search, process and manage vast quantities of data. From collection through to production, Nuix is the go to platform for extensive data management and remote downloads.

eDiscovery Services

- Complimentary consultations & advice
- Fixed price quotations
- EDQ consultancy
- Forensic data collection
- De-duplication & keyword consultancy
- Early case assessment
- Online document review
- Secure data hosting & back up
